Kamal Dev

Co-Founder at Alpyus Technologies
Bengaluru

Summary

Technology and Business has always been a driving factor for my
personal and intellectual growth. I am from a computer science
background but keenly interested into business, this has led to
a special bond in my brain that makes me link every technical
opportunity to a business opportunity.
I have worked as a Software Engineer Intern at Intel at high end
technologies with genius minds towards a new innovative tech driven
future. Challenges are something that makes me go crazy. And at
Intel, my each and every day used to be filled with challenges to
meet up with industry standard and always keep on learning new
things to be updated with technology.

I have been an entrepreneur since very childhood. I used to sell inks
in school for small pennies as in our school we were only allowed to
use ink pens and not the ball pens. Also in my school days I have
been involved in lending out my bicycles to other fellow students who
didn't had a bicycle at that time. These were some small activities
how I started my interest in business. Now speaking of my actual,
legal previous experience, in my class 12th, I founded Follery
Pvt Ltd, an E-commerce company that was dealing with Fine Art
products. To some extent this was going well but I faced problems
in scaling this up. This was my successful failure experience where
I learned two things - Importance of Market Understanding and
Importance of a strong Team. After this I also worked on two more
business one in Healthcare sector and another in Digital Magazine
but both ended up to be a good learning and experience for me.

Health, Education, Sanitation and Latest Techs, these are the major
domains of my interest and most of my work has always been in
these sectors. My capability to grasp things fast and to work till
perfection makes me capable of taking up any kind of work and
excelling in that. I am always up for any kind of collaboration and
projects in any of the above mentioned domain.

Experience

Alpyus Technologies
Co-Founder
July 2020 - Present (2 months)
Bengaluru, Karnataka, India

Intel Corporation
Software Engineer Intern
July 2019 - June 2020 (1 year)
